

~ Chanshare Native ~

Chanshare Native™ is Water-Wise™ Turf. Chanshare Native™ is a blend of crested wheatgrasses that are suited perfectly for Utah's wide range of temperatures. Each cultivar is selected for quick seedling emergence, excellent vigor, rapid establishment, and the ability to grow on a wide variety of soils. One mowing late in the fall to prevent snow mold after winter is generally sufficient maintenance for Chanshare Native™. Plants generally grow 8-20" with 12-15" of annual water. Chanshare Native™ provides a natural landscape look for low traffic areas such as medians and hillsides.

(See reverse for specifications)
